

Please respond honestly and to the best of your ability. If you do not feel comfortable putting your name on this assignment please put the assignment in an envelope with your name on the envelope so I can give you credit for the assignment.

The following questions are meant to inquire about your knowledge of calculus, not passing the class. The difference being passing the class means doing the homework to get the points for a good grade, LEARNING calculus means asking about things you didn't understand whether an assignment was on time or not.

1. Do you want to pass the AP Calculus Exam?
2. What was your reason for taking AP calculus?
3. How serious would you say you were about learning calculus (not passing the class, LEARNING calculus)?
4. Do you feel that you took advantage of all the opportunities that were given to improve your calculus abilities?
5. Do you feel I prepared you for what to expect on the exam day (procedures, content, and expectations)?
6. What can I (Munch) do in the future to better support a student in my calculus class?
7. Think about what other teachers did to review for their AP tests, were there strategies/assignments etc. that you would have liked to see in this class?
8. With the remaining time before the AP test, what do YOU need to do to best prepare yourself?
